

# PRODUCT INFORMATION

## PAINT SHOP CONTAINERS

### Description:

This custom made container is typically used for storage and mixing of paint. The container is insulated to A60 and comes fully equipped with a mixer bench, storage lockers, ventilation supply and extract system, a sink and hand wash basin, water heater, as well as all electrical- and instrument installation.

The electrical equipment is for use in Zone 1. A heavy duty stainless steel pneumatic operated door is installed, as well as a lifting beam for handling of heavy equipment.

The container material is typically 4 mm Mild Steel, Painted to clients specification (e.g. NORSOK M-501), but can also be made in stainless steel and aluminium.

ATC can perform all the engineering, fabrication, outfitting and testing of this container. This custom built container involves many disciplines and is a good example of the wide range of skills of the ATC crew.
