STEAM GENERATOR CONTAINERS

Description:

This 20' High Cube ISO container (6058 x 2348 x 2896mm) has been re-built and modified by ATC for installation of a steam generator.

The modification involves a stainless steel water tank holding 5000 liters, foundations for the customer supplied diesel generator set, insulation and cladding, entrance door, electrical installation, ventilation openings, weather louvers and shut off dampers.

We also supplied a fuel tank and a smaller water tank. A small control room was built next to the steam generator. In this project we installed the customer supplied steam generator and diesel generator set, and prior to shipping the container was tested at Minnesund.

The container is designed by ATC through a flexible and close cooperation with our customer.
