

### **Description:**

For many years ATC has designed and fabricated control cabins, for both offshore and onshore use.

The design is done in close cooperation with our customers, since the cabins are custom made to fit each project.

The example shown above is intended for onshore use where the design and engineering was based on the customer's sketches and basic specification

The unit was built at our plant in Minnesund, including insulation, cladding, benches and windows with hinged safety grid.

Electrical installation and lighting was also part of our delivery.
