

BUSINESS CONTINUITY PLAN

The following is a summary of Trans Constructions plan is to ensure continuity of work and reduce the damage and delay to ongoing orders where work is stopped due to fire, damage to nature etc.

- The building is secured with a dedicated central fire alarm (Autronica) with direct coupling to the local fire station.
- In an event that the the alarm is activated, the fire station are automatically informed and 2 people within the company management are also given automatic notice at the same time. This will ensure people are present quickly and reduce the amount of damage.

In order to secure electronic information, the company have:

- One physical server, new in 2017 with VMware Sphere virtual servers for various purposes, and internal harddrives set up in a RAID 10 configuration. The server unit is configured with redundant powersupplies, fans and network adapters. The server has a guaranteed NBD 9 hour response time for hardware failure. In addition the company has a service agreement with a maximum response time of 4 hours for other IT environment interruptions.
- A net based backup solution with redundant external storage, as well as a local stored backup.
- All software programmes can be downloaded from the net.

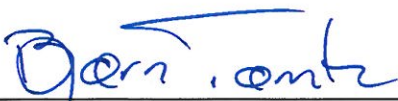

The above shall ensure that within maximum 48 hours, the company can have obtained necessary equipment and software and have full access to stored information.

The company have full insurance against the previous years turnover.

The company do not have any agreement for temporary offices or production, but a container based office solution can be organised at short notice.

Continuity of production is ensured through a large network of cooperating production companies

Signed on behalf of Trans Construction AS
